Gansu Daily : [Kuaishou Keling AI Helps Rural Children Realize Their Dreams, and Technology Does Good to Promote the Development of Rural Education](#)

As World Children's Day approaches on November 20th, Kuaishou Public Welfare carried out a Keling AI experience class with the theme of "My Dream" at Zhongchuan Town Central Primary School in Huining County, Gansu Province. Using Kuaishou computer classrooms and Keling AI technology, it stimulates the creativity and learning interest of rural children. Through on-site teaching and interaction, children experience the powerful functions and application scenarios of AI large models, inspiring their future technology dreams. In recent years, with the rapid development of science and technology, AI technology is being more widely disseminated and applied, and technological progress has driven changes in the production, life, and learning methods of the general public. For rural education, the application of AI technology in the classroom can effectively make up for the gap in urban and rural educational resources, giving rural children more opportunities to contact and understand cutting-edge technology, creating favorable conditions for the comprehensive development of rural students.
